

## Oral Health Coding Fact Sheet for Primary Care Physicians

**CPT Codes:** Current Procedural Terminology (CPT) codes are developed and maintained by the American Medical Association. The codes consist of 5 numbers (00100 - 99999). These codes are developed for physicians and other health care professionals to report medical procedures to insurance carriers for payment.

**CDT Codes:** Code on Dental Procedures and Nomenclature (CDT) codes are developed and maintained by the American Dental Association. These codes provide a way to accurately record and report dental treatment. The codes have a consistent format (Letter D followed by 4 numbers) and are at the appropriate level of specificity to adequately encompass commonly accepted dental procedures. These needs are supported by the *CDT codes*.

### Prophylaxis and Fluoride Varnish

**99188** Application of topical fluoride varnish by a physician or other qualified health care professional

- This code was approved to begin January 1, 2015. It only includes varnish application, not risk assessment, education, or referral to a dentist.
- The USPSTF recommended this for children up to 6 years of age. Therefore Code **99188** must be covered by commercial insurance by May 2015 for children up to age 6. Check with your insurers for specifics.
- No RVU have been set by CMS because Medicare does not cover dental related services.
- The Section on Oral Health tracks [payment](#) for services.

**D1206** Topical application of fluoride varnish

**D1208** Topical application of fluoride

**99429** Unlisted preventive medicine service

**99499** Unlisted evaluation and management service

### Other Preventive Oral Health Services

**D1310** Nutritional counseling for the control of dental disease

**D1330** Oral hygiene instruction

### Clinical Oral Evaluation

**D0140** Limited oral evaluation, problem focused

**D0145** Oral evaluation for patient under 3 years of age and counseling with primary caregiver

### Oral Procedures

**D7140** Extraction, erupted tooth or exposed root (elevation and/or forceps removal)

Alternate coding: CPT code **41899** Unlisted Procedure, dentoalveolar structures

While use of a more specific code (ie, **D7140**) is preferable to a nonspecific code (ie, **41899**), reporting the CPT code may increase a pediatrician's likelihood of getting paid. As an unlisted service, chart notes may need to accompany the claim.

### **Modifiers**

For those carriers (particularly Medicaid plans under EPSDT), that cover oral health care, some will require a modifier (See "Private Payers and Medicaid" below)

**SC** – Medically necessary service or supply

**EP** – Services provided as part of Medicaid early periodic screening diagnosis and treatment program (EPSDT)

**U5** – Medicaid Level of Care 5, as defined by each state

### **Other (Referral Codes)**

**YD** – Dental Referral

- This referral code is used in the state of Pennsylvania for EPSDT services and may be used by other payers

### **ICD-10-CM Codes**

- For use on or after October 1, 2015

**E08.630** Diabetes Due to Underlying Condition with Periodontal Disease

**E09.630** Drug/chem Diabetes Mellitus w/Periodontal Disease

**E10.630** Type 1 Diabetes Mellitus with Periodontal Disease

**E11.630** Type 2 Diabetes Mellitus with Periodontal Disease

**K00.3** Mottled teeth

**K00.81** Newborn Affected by Periodontal Disease in Mother

**K02.3** Arrested dental caries

**K02.51** Dental caries on pit and fissure surface limited to enamel

**K02.52** Dental caries on pit and fissure surface penetrating into dentin

**K02.53** Dental caries on pit and fissure surface penetrating into pulp

**K02.61** Dental caries on smooth surface limited to enamel

**K02.62** Dental caries on smooth surface penetrating into dentin

**K02.63** Dental caries on smooth surface penetrating into pulp

**K02.9** Dental caries, unspecified

**K05.00** Acute gingivitis, plaque induced (Acute gingivitis NOS)

**K05.01** Acute gingivitis, non-plaque induced

**K05.10** Chronic gingivitis, plaque induced (Gingivitis NOS)

**K05.11** Chronic gingivitis, non-plaque induced

**K05.5** Other Periodontal Diseases

**K05.6** Periodontal Disease, Unspecified

**K06.0** Gingival Recession

**K06.1** Gingival Enlargement

**K06.2** Gingival & Edentulous Alveolar Ridge Lesions Associated with Trauma

**K08.121** Complete Loss of Teeth Due to Periodontal Diseases, Class 1

**K08.122** Complete Loss of Teeth Due to Periodontal Diseases, Class II

**K08.123** Complete Loss of Teeth Due to Periodontal Disease, Class III

**K08.124** Complete Loss of Teeth Due to Periodontal Diseases, Class IV

**K08.129** Complete Loss of Teeth Due to Periodontal Disease, Unspecified Class

**K08.421** Partial Loss of Teeth Due to Periodontal Diseases, Class I

**K08.422** Partial Loss of Teeth Due to Periodontal Diseases, Class II

**K08.423** Partial Loss of Teeth Due to Periodontal Diseases, Class III

**K08.424** Partial Loss of Teeth Due to Periodontal Diseases, Class IV

**K08.8** Other specified disorders of teeth and supporting structures

**R19.6** Halitosis

**S02.5XX-** Fracture of tooth (traumatic)

**S03.2XX-** Dislocation of tooth

- - A 7<sup>th</sup> character is required for both **S02** and **S03** to show the encounter. 7<sup>th</sup> character "A" would show that the encounter is for initial or active treatment
- Also include other codes that relate to the payer how the injury happened, including location and activity. Some states require the reporting of this information.

**Z00.121** Encounter for routine child health examination with abnormal findings (Use additional code to identify abnormal findings, such as dental caries)

**Z00.129** Encounter for routine child health examination without abnormal findings

**Z13.84** Encounter for screening for dental disorders

**Z41.8** Encounter for other procedures for purposes other than remedying health state (topical fluoride application)

**Z71.89** Other Specified Counseling

**Z72.4** Inappropriate diet and eating habits

**Z92.89** Personal history of other medical treatment

## Private Payers and Medicaid

Most private/commercial payers must pay for **99188** under the health or medical plans for children up to age 6 by May, 2015 because the US Preventive Services Task Force recommended it as a Level B recommendation. They are not mandated to cover older children. The primary reasons why medical health plans do not cover the fluoride varnish, risk assessment, education, and referral to a dentist are that the health plan does not include dental services, or if there is limited coverage for certain dental services, the provider network is limited to dentists or oral surgeons. Since most carriers' claims systems do not recognize the dental service codes (D codes) on their medical claims platforms, CPT code 99188 was developed in 2015. Starting in 2014, the Affordable Care Act requires that individual and small-group health plans sold both on the state-based health insurance exchanges and outside them on the private market cover pediatric dental services performed by dental professionals. However, health plans that have grandfathered status under the law, or employers whose plans are covered under ERISA by Third Party Administrators, are not required to offer this coverage.

At the following link you can find a chart about Medicaid reimbursement and which codes to use by state <http://www2.aap.org/oralhealth/docs/OHReimbursementChart.pdf> . However, please check with your individual state as their procedures change frequently without uniformity!

---

## FAQ

**Q.** When was the new CPT code (**99188**) effective?

**A.** The *CPT* Editorial Panel approved the new CPT code 99188 for implementation on January 1, 2015.

**Q.** May I still bill the CDT code for topical fluoride application to my Medicaid plan or must I use the new *CPT* code?

**A.** If your Medicaid plan still requires and will pay on the CDT codes, you should continue to report the CDT codes as defined by your Medicaid plan. This will vary from state to state.

**Q.** Our practice was happy to see the new *CPT* code; however, what does it mean “by a physician or other qualified health care professional”?

**A.** In order to obtain approval by the *CPT* Editorial Panel, we had to include this language as part of the code descriptor. Inclusion of this language does limit who may perform and report the service. The *CPT* definition “other qualified health care professionals” excludes clinical staff such as RNs and LPNs. Basically, an “other qualified health care professional” is one who can independently practice and bill under her own name. In practice, this means that *CPT* requires a physician or other qualified health care professional perform the topical fluoride application. While state scope of practice and Medicaid qualifications may allow clinical staff (eg, RN) to perform this service, *CPT* guidelines do not allow the reporting of code 99188 in those instances. However, if you are able to work with your payers and get it in writing that they will allow clinical staff to perform the service based on state scope of practice, and report incident to the supervising provider, then you would be able to use the code. Note that the CDT codes do not have this restriction. Also there is a caveat in the “*CPT* Changes” manual that alludes to the application of topical fluoride varnish to those patients with “high risk” for dental caries.

**Q.** What is the value for this new code?

**A.** When the AAP brought the code to the valuation committee, our recommended relative value units (RVUs) were accepted by the committee and submitted to CMS for consideration on the Medicare physician fee schedule. However, CMS decided not to publish the recommended RVUs. Instead, the code was published with zero RVUs. While this is the Medicare fee schedule, many private payers follow this. The AAP is currently advocating for CMS to publish the recommended RVUs for code **99188**.

**Q.** Should we advocate for coverage by payers and if so, for how much?

**A.** Yes. The AAP encourages working with your AAP State Chapter. Because there are no RVUs published, if your Medicaid sets a payment rate for this service, you should advocate for that rate at minimum. However, it will be important to determine with your payers if they will require physicians or other qualified health care professionals to perform the service, or if they will base the requirements on state scope of practice or Medicaid qualifications.

**Q.** If this new CPT code (**99188**) is to be used for “high risk caries” – how do you identify that? Is a formal screen required?

**A.** At this moment in time there is not a validated risk assessment tool for dental caries and the application for the CPT code was submitted prior to the publication of the new USPSTF guidelines so it contains information regarding risk. Even so, the state of "high risk" is at the discretion of the examining physician. The AAP does have a risk assessment tool (<http://www2.aap.org/oralhealth/riskassessmenttool.html>) that can be used as a guide, but ultimately it is deferred to the clinician's judgment and may be provided to all children under the age of six as a preventive service if that is the approach the clinician wishes to take. The USPSTF recommendations (<http://www.uspreventiveservicestaskforce.org/Page/Document/RecommendationStatementFinal/dental-caries-in-children-from-birth-through-age-5-years-screening>) and more recent AAP policy (<http://pediatrics.aappublications.org/content/134/3/626.abstract>) certainly back this approach should someone need information to present to a payer.

So to answer your questions, yes, we would agree that a child who is without a dental home is high risk and should have varnish applied in the medical home, and no, I don't think there is something more discernible that can only be used by dental professionals to assess risk and therefore would leave a pediatrician without the opportunity for payment. There are no validated tools being used in dentistry currently either.

While this may seem a little confusing, this is an evolving area and we are doing our best to keep up!
